Prepared By: JD

Slide 2: What is Phishing?

Definition

Phishing is a cyberattack where attackers impersonate trusted organizations to steal sensitive information such as:

Passwords

Credit card details

Banking information

Personal data

Objective

Trick users into revealing confidential information.

Slide 3: Why Phishing is Dangerous

Consequences

Financial loss

Identity theft

Data breaches

Unauthorized account access

Statistics

Millions of phishing emails are sent daily
worldwide.

Slide 4: Types of Phishing Attacks

Email Phishing

Fake emails pretending to be legitimate companies.

Spear Phishing

Targeted attacks on specific individuals.

Whaling

Attacks targeting executives and managers.

Smishing

Phishing through SMS messages.

Vishing

Phishing through phone calls.

Slide 5: How Phishing Works

Step 1

Attacker sends a fake email or message.

Step 2

Victim clicks a malicious link.

Step 3

Victim enters credentials on a fake website.

Step 4

Attacker steals information.

Flow:

Attacker → Fake Email → Victim → Fake Website → Data
Theft

Slide 6: How to Identify Phishing Emails

Warning Signs

- ✗ Suspicious sender address
- ✗ Urgent language
- ✗ Grammar and spelling mistakes
- ✗ Unexpected attachments
- ✗ Requests for passwords or OTPs

Example

Fake:

support@paypa1.com

Real:

support@paypal.com

Slide 7: Recognizing Fake Websites

Check for:

- ✓ HTTPS
- ✓ Security lock icon
- ✓ Correct domain name
- ✓ Professional design

Example

Fake:

amazOn-login.com

Real:

amazon.com

Slide 8: Social Engineering Tactics

Attackers often exploit:

Fear

"Your account will be suspended."

Urgency

"Act within 24 hours."

Curiosity

"See who viewed your profile."

Greed

"Congratulations! You won
₹50,000."

Slide 9: Real-World Example

Example Attack

Victim receives a fake bank email.

Email asks to verify account
details.

Victim clicks the link.

Credentials are stolen.

Bank account is compromised.

Lesson

Always verify before clicking.

Slide 10: Best Practices Protection Tips

- ✓ Enable Multi-Factor Authentication (MFA)
 - ✓ Use strong passwords
 - ✓ Verify sender identity
 - ✓ Keep software updated
 - ✓ Never share OTPs
- ✓ Hover over links before clicking
 - ✓ Report suspicious emails

Slide 11: Interactive Quiz

Question 1

You receive an email saying:

"Your account will be locked today. Click here immediately."

A. Safe

B. Suspicious

Answer: B

Question 2

Which URL is safer?

A. paypa1-security.com

B. paypal.com

Answer: B

Slide 12: Conclusion

Key Takeaways

Think before you click.

Verify before you trust.

Report suspicious
messages.

Stay cyber-aware.

Thank You
